What is Enteric Coating?

An enteric coating is a barrier that controls the location of oral medication in the digestive system where it is absorbed. The word "enteric" indicates small intestine; therefore enteric coatings prevent release of medication before it reaches the small intestine.

Structure of Sanaviva Smart Omega Enteric Coated Softgel:

Softgel dissolves in the intestines

Enteric coating prevents Softgel from dissolving in your stomach and it travels into the intestines.

Enteric coating dissolves alongside the softgel in the intestine environment.

Outer Shell: Enteric Coated Layer

Inner Core: Fish Oil

Sanaviva Smart Omega for Targeted Release of Fish Oil Containing Omega-3 Fatty Acids:

Sanaviva Smart Omega enteric coated softgels, which withstand stomach acid to release Omega-3 Fatty Acids directly into the intestinal tract. This ensures you get the benefits of fish oil, but without the negative side effects associated with many uncoated fish oil products.

- Gentler on Stomach
- Easier to Digest
- No Fishy After Taste and fish breath
- Odor-controlled
- Better absorption by the body

How to take Sanaviva Smart Omega?

Recommended Daily Intake Dosage:

Take 1-4 softgels daily. The dose should be taken with food. The daily dose may be changed according to your doctor's prescription.
